demethylubiquinone-9 = S-adenosyl-L-homocysteine + ubiquinone-9.
                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  demethylubiquinone-9 = S-adenosyl-L-homocysteine + ubiquin
-!- PATHWAY: Ubiquinone biosynthesis.
-!- SIMILARITY: Belongs to the methyltransferase superfamily.
UbiG/COQ3 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NameaubiG; OrderedLocusNames=Atu3509, AGR L_2640;

No. is the number of results predicted by chance to h
score greater than or equal to the score of the result bein
and is derived by analysis of the total score distribution.

; Sequence 1, Application US/08448489
; Patent No. 6184022
; GENERAL INFORMATION:
    APPLICANT: SEIKI, Motoharu
    APPLICANT: SHINGAMA, Akira
    APPLICANT: SHINGAMA, Akira
    TITLE OF INVENTION: NOVEL METALLOPROTEINASE AND ENCODING DNA THEREFOR
    FILLE REFERENCE: 55-290F
    CURRENT APPLICATION NUMBER: US/08/448,489
    CURRENT PILING DATE: 1995-06-07
    NUMBER OF SEQ ID NOS: 19
    SOFTWARE: PatentIN Ver. 2.0
    SEQ ID NO 1
